

Phishing Prevention Guide

Types of Phishing Attacks

1. Email Phishing: Fake emails that appear to be from trusted sources, asking users to click malicious links or share sensitive information.
2. Spear Phishing: Targeted attacks using personal information to appear more convincing.
3. Smishing: Phishing attempts via SMS messages, urging recipients to click a link or call a number.
4. Vishing: Voice phishing, where scammers impersonate legitimate organizations over the phone.
5. Pharming: Redirecting users from legitimate websites to fake ones to steal login credentials.
6. Social Media Phishing: Fake profiles or messages on platforms like Facebook, LinkedIn, or Instagram.

Prevention Tips

1. Be Skeptical: Avoid clicking on suspicious links or downloading unexpected attachments.
2. Check URLs: Hover over links to verify their destination. Ensure websites use HTTPS.
3. Verify Senders: Contact the sender through another method if an email seems unusual.
4. Use Security Software: Keep antivirus and anti-malware software updated.
5. Enable Multi-Factor Authentication (MFA): Adds a second layer of security beyond just passwords.
6. Educate Yourself: Stay informed about the latest phishing tactics.
7. Report Phishing Attempts: Notify your IT department or use official reporting tools.
